Plant Care Guide

Simple steps for healthy , happy plants

Golden Pothos

(*Epipremnum aureum* 'Marble Queen')

Golden Pothos, scientifically known as *Epipremnum aureum* 'Marble Queen', is a popular trailing vine with variegated leaves. It features heart-shaped leaves that are predominantly green with striking marbled patterns of creamy white and light green. This plant adds a touch of elegance and beauty to any space, making it a favorite choice for indoor gardens and hanging baskets.

Origin: Southeast Asia

Care Level & Placement: Easy care, Indoor plant

Light

Golden Pothos thrives in bright, indirect light but can tolerate lower light conditions. It can be grown in various indoor locations, including rooms with limited natural light. Avoid placing it in direct sunlight, as it can scorch the leaves.

Water

Allow the top inch of the soil to dry out between waterings. Water the plant thoroughly and let excess water drain away. Golden Pothos is forgiving when it comes to underwatering but can suffer if overwatered. Adjust watering frequency based on the environmental conditions and season.

Soil

Use a well-draining potting mix that retains moisture without becoming waterlogged. A combination of peat moss, perlite, and vermiculite works well for Golden Pothos. Ensure the container has drainage holes to prevent water stagnation.

Fun fact

Golden Pothos is known for its air-purifying qualities and can help remove toxins from the indoor environment, including formaldehyde, benzene, and xylene.

Pet Friendliness

Golden Pothos is toxic to pets if ingested. Keep it out of their reach to ensure their safety.

Stress Signs

Wilting or Drooping Leaves: Wilting or drooping leaves are a sign of underwatering. Check the soil moisture level and water the plant adequately. Golden Pothos can tolerate some degree of dryness, but persistent wilting indicates a need for watering

Yellowing Leaves: Yellowing leaves can occur due to overwatering or poor drainage, leading to root rot. Adjust your watering routine and ensure the plant's container has drainage holes. Trim away any severely damaged or yellowed leaves to encourage new growth..

Leggy Growth or Lack of Variegation: Insufficient light can result in leggy growth with sparse foliage and diminished variegation. If your Golden Pothos isn't receiving enough light, move it to a brighter location. Provide adequate indirect light to promote healthy growth and vibrant leaf patterns.

Botanical Family: Araceae

Botanical Name: Epipremnum aureum 'Marble Queen'

Common Name: Golden Pothos, Marble Queen Pothos
