Plant Care Guide

Simple steps for healthy , happy plants

Spider Plant

(Chlorophytum Comosum)

Spider Plant is a popular indoor plant with arching, green leaves that have a distinctive white or cream-colored stripe down the center. The leaves are long and slender, resembling spider legs, hence the name.

Nook & Nature

By Neha Kunal Deshmukh

Origin: Southern Africa

Care Level & Placement: Easy Care, Indoor & Outdoor plant

Light

Thrives in bright, indirect light but can tolerate lower light conditions.

Water

Keep the soil evenly moist but avoid overwatering, as Spider Plants are susceptible to root rot.

Soil

Well-draining soil mix, such as a standard potting mix with added perlite or sand.

Fun fact

Spider Plants produce small, offshoots called "spiderettes" that dangle from long stems, resembling tiny spiders.

Pet Friendliness

Considered non-toxic to pets, making it a safe choice for households with animals

Stress Signs

Brown tips on leaves: Can indicate underwatering or low humidity levels.

Yellowing or pale leaves: May occur due to overwatering, poor drainage, or excessive exposure to direct sunlight.

Limp or drooping leaves: Can be a sign of underwatering or root issues. Check the soil moisture and drainage.

Botanical Family: Asparagaceae

Botanical Name: Chlorophytum Comosum

Common Name: Airplane Plant, Ribbon Plant
